Welding Commodity costs are the biggest expense in non-production parts...

Check out how Huys engineers can reduce your costs through innovative ideas and solutions. Huys has been able to design and build jigs and fixtures that have helped solve a number of customers' problems. Below is a job that Huys designed and built in 24 hours — saving time and money for our customer! Service is our top priority.

New Customer Service Representatives!

Tammy White

Huys is pleased to introduce two new CSRs, Tammy White in our Windsor Office & Sandra Fernandez in our Toronto office.

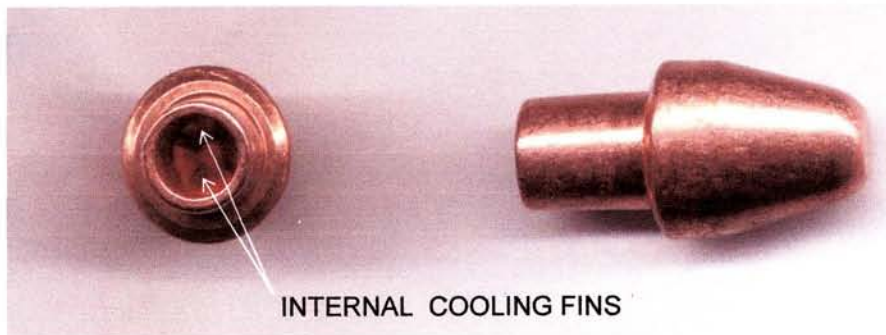

Sandra Fernandez

Huys' FINNCAPS™ are COOL!

Proper cooling is essential for the best performance in resistance welding. Generally, heat is more easily extracted through liquids than through solids. As a result, Huys' research & development department has introduced internal fins on some cold formed male electrodes. If you have good cooling now, check this out.

Huys now makes cables and shunts for most resistance welding applications!

INTERNAL COOLING FINNS

Huys is **ISO 14001**, **QS 9000 TE** and **ISO 9002** registered.

HUYS' NEW Cost per Weld Programme

"Cost per weld" analysis has been around for years. Huys takes this analysis further with technicians and welding engineers. Huys can help set up custom "cost per weld" programmes which will fix your copper con-

sumable costs a year or more in advance. Huys' experience has been gathered at O.E.M. and Tier 1, 2, and 3 plants in Europe and North America. Depending upon your needs, programmes can be set up to assist with all copper consumable consumption and maintenance. Plans can be simple or involved. Call for details or a confidential assessment of your company's suitability.

Our 10,000,000th Recycled Electrode!

In March 2003, Huys shipped the **10,000,000th** electrode that has been coated, used and then **recoated** by the Huys' patented and proprietary **ISO 14001** recycling programme. Call Gord at 1-416-747-1611 to see how you can save money with Huys' **QS 9000 TE** approved system of **quality**, re-machined and re-coated electrodes. You will be surprised how good they are—guaranteed.

Huys is **ISO 14001**, **QS 9000 TE** and **ISO 9002** registered.
