NEW Version 6.0 of SORPAS® And NEW ENTERPRISE Edition

Automatically runs a series of simulations according to the user defined range of weld currents from lower current limit to higher current limit and a specified number of current levels.

Automatically runs simulations against a given objective for a weld nugget size or diameter to seek the optimal weld current

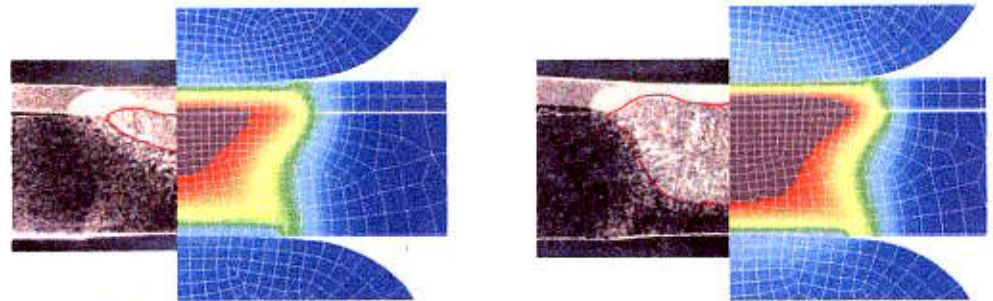

Automatically verifies the contact resistance multiplying factor (clean-dirty factor on the interface) to achieve a given weld nugget diameter for new materials. With the support of contact resistance tests, this will verify the contact resistance of the new materials.

See who uses SORPAS:

Ensure before Welding!

Call to receive your CD Demo Disk to see how you can save money, improve quality, and move your welding into the 21st century!

Now there is a SORPAS™ Users' Group!

Join us for an informal monthly meeting of Sorpas users and people who want to learn how to improve their resistance welding! Our first meeting was in February — contact techsupport@HuysIndustries.com for the next meeting and details.

Huys is ISO 14001 and EN ISO 9002 registered.
